Subject: Flint Hills Resources - #3 Crude/Coker Improvements Projects - CRA Follow-up Questions

Ms. Darrow,

As a part of our meeting last week you had asked for confirmation that there has not been any concerns (archaeological or historical perseveration related) identified in the past associated with the land that will be excavated as a part of the #3 Crude/Coker Improvements project, which wouldn't been identified in the current Cultural Resources Analysis (CRA). I was able to re-confirm internally that planned area of excavation has been an active area of the refinery for several decades, and that there has not been any archeological/historical concerns identified at or near this area within the refinery. Please let me know if there is any additional information that you need for your CRA write-up.

Thanks,
Mark
